PROJECT BRIEF

Client:	The Airplane Owners and Pilots Association	Deadline:	Tuesday, November 10
Project Name:		Author:	Parneet Kaur

THE ASK
What is the objective of the project?   Here you need to define the problem: the need statement that you have chosen to address, the target audience (who the apps users will be)   And describe your solution: what your mobile app will be and how it meets the need statement
The need statement is ,Pilot (karen) doesn't like to return to same places repeatedly and land after dark when airports close   The target audience will be the airline pilots the app will be designed for their convenience so that they could get proper information regarding their flights and they can change their destinations according to their priorities, moreover a feature will be added for further bookings i.e., cab or hotels as per schedule.   A feature would be provided to relax them and become stress free
What are the deliverables?   Here you need to define your minimum viable product - exactly what it will include (you should include the number of screens and what would be on each screen).   And describe your three additional features - exactly what they will be (and whether they will be embedded on existing screens or if they will add screens to the app). List them in order of priority.
The app will be easy to use in both android and iOS . At first it would require login details which will have credentials from ID and accordingly the information would be uploaded ,on right-hand side there would be columns providing information regarding flight time, take off and departure . Additionally there would be features like book a cab on arrival, chat with friends and the one which could help everyone would be provided with some mental exercises to relax your brain and get rid of jet lag. All this provided with different screens
